DIRECTIONS

Wear rubber gloves, goggles and suitable protective clothing when handling. Dilute 1 part cleaner with up to 10 parts water. Brush or swab onto the surface to be cleaned, allow to penetrate soils, then rinse thoroughly with clean water. Use with care on painted surfaces.

Use plastic pails for diluting and dispose of excess solution immediately after use.

Do not use on anodized aluminum.

WARNING: This product contains, or may contain, trace quantities of a substance(s) known to the state of California to cause cancer and/or reproductive toxicity.

Extremely corrosive and destructive to tissue. Specialized medical treatment is required for all exposures. May be fatal if inhaled, absorbed through skin, or swallowed.

Material is absorbed through the skin. Get medical attention immediately. While waiting for medical attention, it has been shown that flushing the affected area with water for 1-5 minute and then massaging HF Antidote Gel into the wound until there is a cessation of pain is a most effective first aid treatment.

HF Antidote Gel contains Calcium Gluconate which combines with HF for insoluble Calcium Fluoride, thus preventing the extraction of calcium from the body tissue and bones.

Another alternative first aid treatment, after thorough washing of the burned area, is to immerse the burned area in a solution of 0.2% iced aqueous Hyamine 1622 or 0.13% iced aqueous Zephiran Chloride. If immersion is impractical, towels could be soaked with one of the above solutions and used as compresses for the burn area. Hyamine 1622 is a trade name for Tetracaine Benzethonium Chloride. Zephiran is a trade name for Benzalkonium Chloride.
